

Ali Bel Haj Letaif

Software Engineering – Cloud & Distributed Systems

+216 95 374 008 • belhajla@mail.gvsu.edu • LinkedIn • GitHub: alibhl • Tunis, Tunisia

Professional Summary

Graduate student in Software Engineering specializing in cloud-native systems, distributed architectures, and DevOps automation. Strong background in backend engineering, infrastructure as code, CI/CD, and scalable system design. Admitted to the M.S. in Software Engineering at Grand Valley State University and seeking a Graduate Assistantship to contribute to teaching, research, and cloud systems laboratories.

Education

Engineering Degree in Cloud Engineering 2023 – Present

ESPRIT – Private Higher School of Engineering and Technology, Tunis Relevant Coursework: Distributed Systems, Cloud Computing, Software Architecture, DevOps Engineering

Bachelor's Degree in Computer Systems 2021 – 2023

ISI Mahdia – IoT & Embedded Systems

Professional Experience

End-of-Studies Internship – SRE Platform Engineering 2026 – Present

EXCELLIA Solutions, Tunis

- Designed and implemented an SRE platform for hybrid containerized environments deployed on Azure
- Automated infrastructure provisioning using Terraform and Ansible
- Built CI/CD pipelines and GitOps workflows using GitLab CI and ArgoCD
- Integrated observability stack using Prometheus, Grafana, and ELK

Intern – Containerization & CI/CD 2025

Attijari Bank, Tunis

- Containerized full-stack application (Spring Boot + Angular) using Docker and Kubernetes
- Designed automated CI/CD pipelines using GitLab
- Implemented GitOps-based deployment workflows

Intern – Networking & Security 2024

Kleos, Tunis

- Assisted in enterprise network infrastructure management
- Configured and monitored Fortinet firewall systems

Selected Projects

Private Cloud Infrastructure – OpenStack & Kubernetes 2025

- Automated deployment of OpenStack private cloud using Ansible
- Designed high-availability Kubernetes cluster with auto-scaling
- Deployed microservices-based cloud-native application

Bachelor's Thesis – Smart Greenhouse (IoT & Mobile) Feb 2023 – Jun 2023

- Designed and implemented IoT-based smart greenhouse for real-time monitoring and automation
- Integrated environmental sensors with microcontrollers for data acquisition
- Developed cross-platform mobile application using Flutter
- Implemented real-time cloud synchronization using Firebase
- Enabled automated irrigation and climate control logic

Technical Skills

Programming: Java, Python, JavaScript, TypeScript, C, C++, C#, SQL, Bash

Frameworks: Spring Boot, Angular, Node.js, Hibernate/JPA, REST APIs

Cloud & DevOps: Docker, Kubernetes, Azure, AWS, OpenStack, Terraform, Ansible, GitLab CI/CD, ArgoCD

Observability: Prometheus, Grafana, ELK Stack

Systems: Linux, TCP/IP Networking, Distributed Systems

Certifications

AWS Academy Cloud Operations (2025)

Introduction to Kubernetes – Linux Foundation (2024)

Research Interests

Cloud Computing, Distributed Systems, Site Reliability Engineering, Scalable Software Architecture

Languages

Arabic (Native), English (B2), French (B2)
